Videk Delivers Full Page, Full Color Web Viewing System

Rochester, New York February 2009 – Videk Inc., is proud to announce that Eastman Kodak's Graphic Communication's Group has awarded Videk, Inc. with an order for a full page, full color quality monitoring system on a VERSAMARK VL2000 Printing System for a customer in Spain. This camera inspection system delivers high-resolution images to a monitor allowing operators to view the continuous web in order to make decisions regarding the quality of the printing at full production speeds. Videk's PVS8600™ Series vision system also allows the user to freeze an image of the entire document and pan, zoom and scroll to more closely inspect for printing defects. The 8600 Series products are capable of imaging documents up to 1000 ft./min. in simplex and duplex configurations and can be integrated into a wide variety of paper transports.

"This system is the first in a series of high-speed color inspection systems Videk will be releasing in the near future", states Tom Slechta, CEO and President of Videk. "Color is an important and emerging aspect of transpromotional and commercial print environments and Videk is committed to providing solutions for ensuring the quality and content of these high value documents."

About Videk, Inc.

Videk is the worldwide leader in supplying high speed, real time vision solutions and services for digital print and mail automation. Working with many OEM and Reseller partners, Videk vision systems monitor quality and document security while providing data necessary for reconciliation. Videk's vision expertise is unsurpassed; with more than 25 years of experience developing inspection and verification solutions for both laser and inkjet printers, inserters and document finishing equipment. Videk's headquarters are located in Rochester, New York, USA.
