

## High Volume Archiving for Proof-of-Print Industry Regulations

# DocuVision<sup>®</sup> Pro is the go-to solution for automated, independent print quality assurance

New regulations in healthcare and finance are becoming increasingly demanding. Videk's DocuVision Pro provides automated inspection solution to support production demands for print and mail fulfillment operations and meet compliance regulations.

## Transactional Printing Fortune 100 Healthcare Company

### A CUSTOMER JOURNEY

Due to Healthcare and Financial EFT regulations, a method for recording, tracking and verifying documents was extremely critical. This transactional printer needed to keep a digital record of printed check to satisfy industry regulations.

#### **Videk's DocuVision Pro Web Inspection System solution was selected and implemented.**

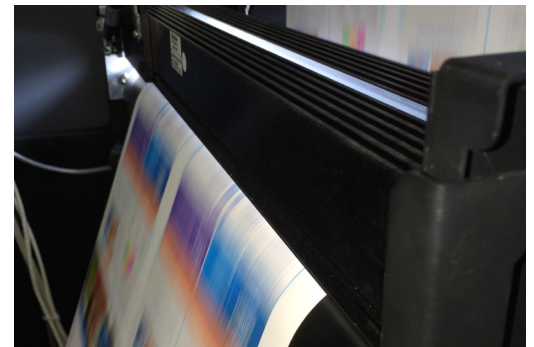

DocuVision Pro's full inspection suite provided all the tools to inspect every printed, analyze data integrity and provide long-terms storage of printed check images.

With Videk on the team, the printer was able to create a closed-loop quality assurance system using vision-based inspection technology, resulting in **100% accountability of all checks printed.**

### THE CHALLENGE

Due to Healthcare and Financial industry regulations, a method for tracking documents was extremely critical.

**Traditional quality controls relied on manual, operator inspections. These methods are expensive, inefficient and inaccurate.** Videk was able to provide the customer with automated, independent inspection to support production demands for varying print and mail fulfillment operations and meet compliance regulations.

## CASE STUDY

# Videk DocuVision® Document Inspection Solution

## THE SOLUTION

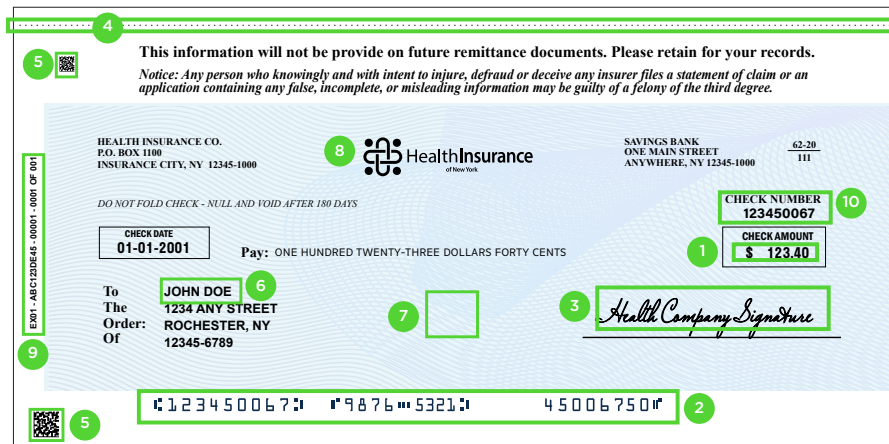

**DocuVision is seamlessly integrated with their production print lines.** With this independent check integrity system in place, there is now a tight protocol enabled to detect quality issues and audit check production errors. In-line data collection and job reporting provides added security and proof of print.

**By using DocuVision Pro, the customer now has independent verification that secures their check printing process and provide a long-term audit trail and proof-of-print.**

DocuVision uses full page imaging to analyze every page and inspect critical aspects of each check. All variable and print quality data is collected and logged using Videk's Integrated Database and Reporting package. An independent report is generated to detect missing or out of sequence pages, and to validate there are no missing or duplicate checks.

Having this extra layer of protection has given this customer the peace of mind that print quality assurance is now automated, check reconciliation reports are generated, and proof-of-print satisfies industry regulations.

## DocuVision Detects, Reads, and Reports:

- |                           |                            |                       |
|---------------------------|----------------------------|-----------------------|
| 1. Check Amount           | 5. Data Matrix / Barcode   | 8. Logo Verification  |
| 2. MICR Line              | 6. Read Payee              | 9. Stock Verification |
| 3. Signature Verification | 7. Background Verification | 10. Read Check Number |
| 4. Perforation Inspection |                            |                       |

“ We do not run without the Videk system in place. Now, our printing process is secure, we have the proof of data to back us up, and in the end, we can all sleep better at night.”

## DOCUVISION AT WORK

Videk DocuVision Pro solution is an independent—but fully integrated—integrity system for inkjet and toner printers. It delivers unsurpassed document verification and security.

### MONITOR

DocuVision Pro uses full-page imaging to look at every document throughout production.

### DETECT

Utilizing proprietary software, the document is analyzed for critical information, including:

- Check numbers
- Account numbers
- Barcodes
- MICR lines

### REACT

If an error is detected, the system goes into action:

- The operator is notified through an on-screen message
- A machine light is illuminated
- The errant document is diverted to the reject bin
- The printer comes to a controlled stop

### REPORT

Data about the entire run is tracked, recorded and saved in an independent database:

- Generate audit, security, or reference reports
- Summarize check runs and alert for out of sequence or error conditions
- Storage of all check page images with 3-month retention period
